

WHMCS Installation

Installation

1. Make sure you have WHMCS v8.1+ installed
2. Download the latest release here https://github.com/Yowpay/yowpay_whmcs
3. Copy the zip contents into your WHMCS installation as follows:
 - copy the yowpay.php file to modules/gateways/yowpay.php
 - copy the callback/yowpay.php file to modules/gateways/callback/yowpay.php
 - copy the yowpay folder to modules/gateways/yowpay

Configuration

1. Login into your WHMCS installation admin section
2. Navigate to System settings > Payment Gateways and select the tab All Payment Gateways
3. Find the YowPay payment gateway button and press it
4. Click on the Manage Existing Gateways tab and find the YowPay payment gateway section
5. Fill in the fields App Token and App Secret Key with the credentials you created on your YowPay account
6. Select EUR as main currency from the select box Convert To For Processing (EUR should be already added as a optional currency for this step to work, go to Payments > Currencies to set this up). If your WHMCS default currency is already EUR you can skip this step.
7. Once you Save changes the module will attempt to link with YowPay servers
8. If all it's setup correctly you should get a message like Module linking successful on your module (use the button Link module with YowPay to try again later in case of error)
9. Your current banking connection status should be also visible trough this module, a message like Get connection data successful should be shown if it was retrieved successfully (use the button Refresh to try again later in case of error)

Documentation and support

Check our documentation for more information about how YowPay works here: <https://yowpay.com/documentation>.
